

**Print Work Orders  
with Attachments  
Directly from  
WorkAlign Scheduler®  
with AventX®**

Drastically reduce the number of steps it takes to complete maintenance scheduling and work order printing activities.

## Maximize Scheduling Efficiency

WorkAlign Scheduler saves maintenance planners/schedulers valuable time and energy, yet efficiency comes to a halt when it is time to print scheduled work orders. Users must leave Scheduler to search for the specific work order and attachment within EBS, then print them with AventX.

By marrying the two solutions, customers get the best of both worlds: VIZIYA's proven scheduling tool with the printing power of STR Software's AventX work order package printing solution. Planners/schedulers can plan a week's work, then print the nicely formatted and collated work order packages for the maintenance team. The powerful and intuitive user interface, combined with the streamlined printing capabilities of AventX, takes full advantage of native functionality while still providing compelling new capabilities.

- ▶ **Fewer clicks – one stop shop.** The seamless integration of AventX with Scheduler means work order and attachment printing is instantly available from where your planners/schedulers accomplish their work.
- ▶ **Shorten the process.** When ready to print a complete work order with attachments, simply click the "print" button. This allows users to spend their time on more productive tasks.
- ▶ **Reduce errors.** Work orders and attachments print as one packet, therefore the chance of human error is significantly reduced and reliability is increased.
