

## Automatically Print or View Work Orders with Attachments

AventX automatically combines work orders with corresponding attachments from Oracle EBS eAM or JDE E1 CAM to print or view on a mobile device. As a complete work packet printing solution, AventX overcomes the limitations associated with native work order preparation. The result is improved safety, reliability and overall asset maintenance.

*“The productivity gains are enormous. Overall, AventX excels in four areas: reduction in print times, support of multiple document types, stapling and collating.”*

*Chris Abbot, Systems Administrator  
Barrick Gold Australia*

## Accelerate Your Best-in-Class Maintenance Program with Automated Work Order Printing

By cutting out manual involvement in the work packet printing process, AventX ensures that work order packages are complete and correct, improves wrench time and overall maintenance productivity, and enables maintenance teams to achieve high safety and reliability standards. AventX provides a seamless workflow for work packet assembly, allowing you to:

- ▶ **Reduce backlog and support preventative maintenance.** Greater efficiency in work packet preparation translates to more time spent on achieving your maintenance goals.
- ▶ **Meet safety and compliance goals.** Never miss a critical piece of documentation when all required attachments are automatically delivered to teams along with your work orders.
- ▶ **Improve overall asset reliability.** Reliability is the ultimate test for maintenance departments. Guarantee that newly added, enhanced or revised procedures are automatically included when they are needed.

### Key Product Features:

- ▶ Print work orders plus attachments without leaving the application
- ▶ Access and print attachments from anywhere on the network
- ▶ Print attachments of all types: MS Office, PDF, PCL, TIFF, HTML, JPEG, GIF, PNG and more
- ▶ Pick and choose which attachments print with a given work order
- ▶ Submit to print or view via single, batch or scheduled batch
